

Consultancy Services

Providing consultancy services to the community members, professional bodies and collaborating agencies is a key initiative of our institute that enables the students and faculty to push the boundaries of classroom teaching to solve real world problems. The college has instituted a consultancy policy that meticulously puts forth the areas of possible consultancy under paid and non-paid services and lists the activities that entail research consultancy and training, management related consultancy work and project evaluation among many.

Faculty across departments are actively involved in providing consultancy services as a part of several Memorandum of Understanding (MOUs) that are signed with various organizations (Government, Private, Associations, Educational Institutions) for academic and research collaborations. Main areas of consultancy work pertain to: Collaborative research projects, designing and starting innovative programs and curriculums and community outreach projects. These projects have benefitted the Faculty and students to have hands on experience and training to enhance their knowledge and skills while contributing to their areas of specializations and society at large.

At our institute, the consultancy services entail a dynamic learning opportunity for the faculty members who gain by sharing their expertise with the industry and the students who enjoy an experiential learning opportunity that eventually strengthens the research skills, instils empathy towards the community and fosters meaningful collaborations with the outside agencies.
