

THERE IS NO PLANET B

AN ECOSYSTEM RESTORATION INITIATIVE

By Krishanu Chatterjee

- Bhavans B.P. Vidya Mandir, Trimurti Nagar, Nagpur

Do you want to see
the world outside
our beautiful
village?

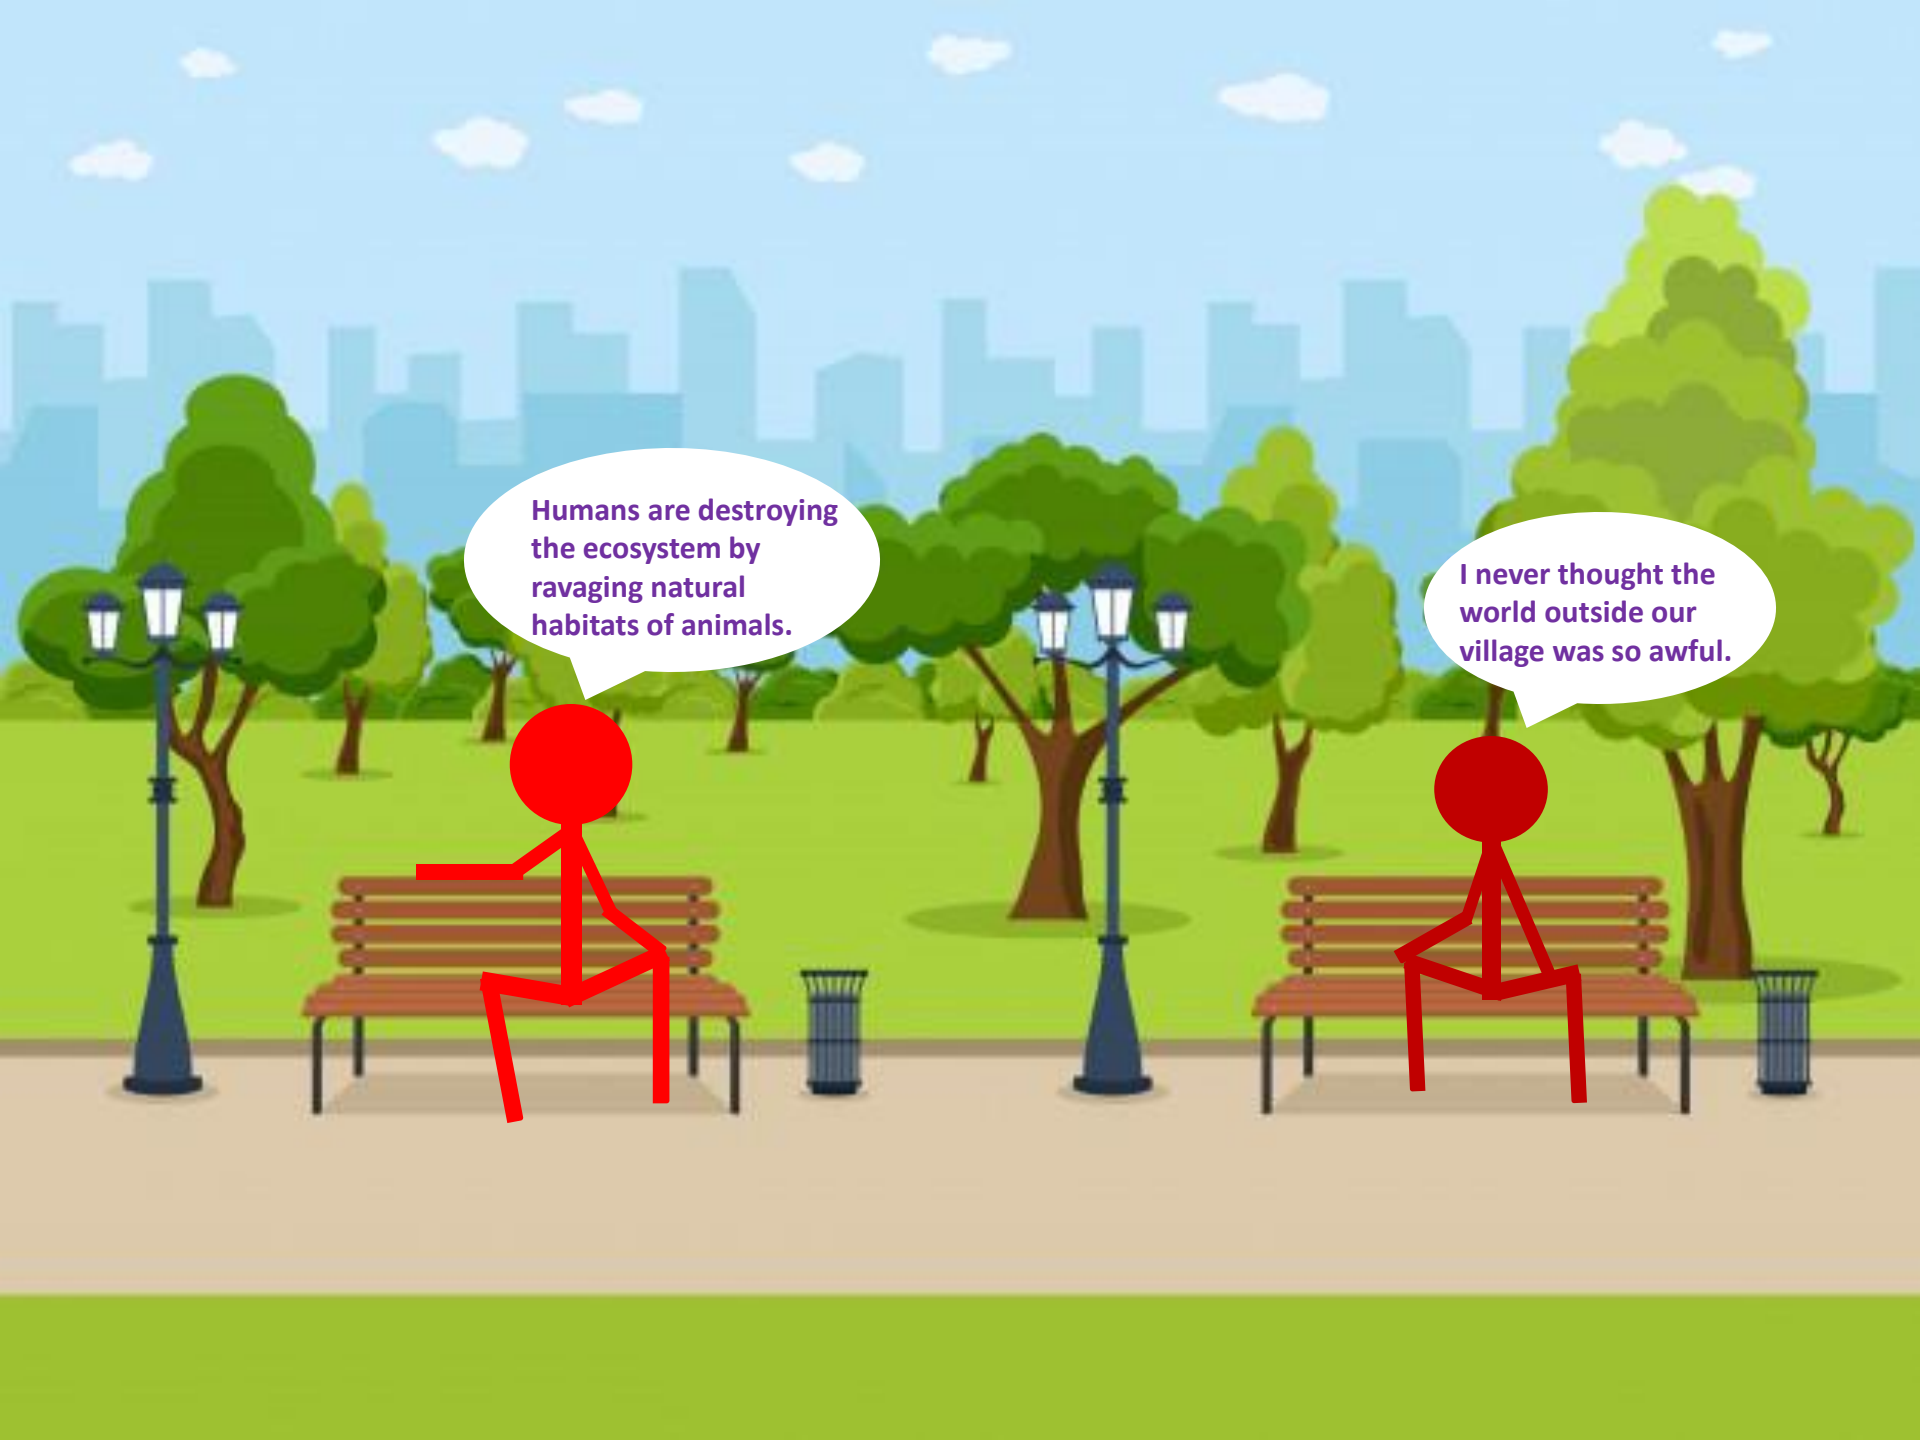

Yeah! I wanted to go
outside this village
from so many years.

rio.

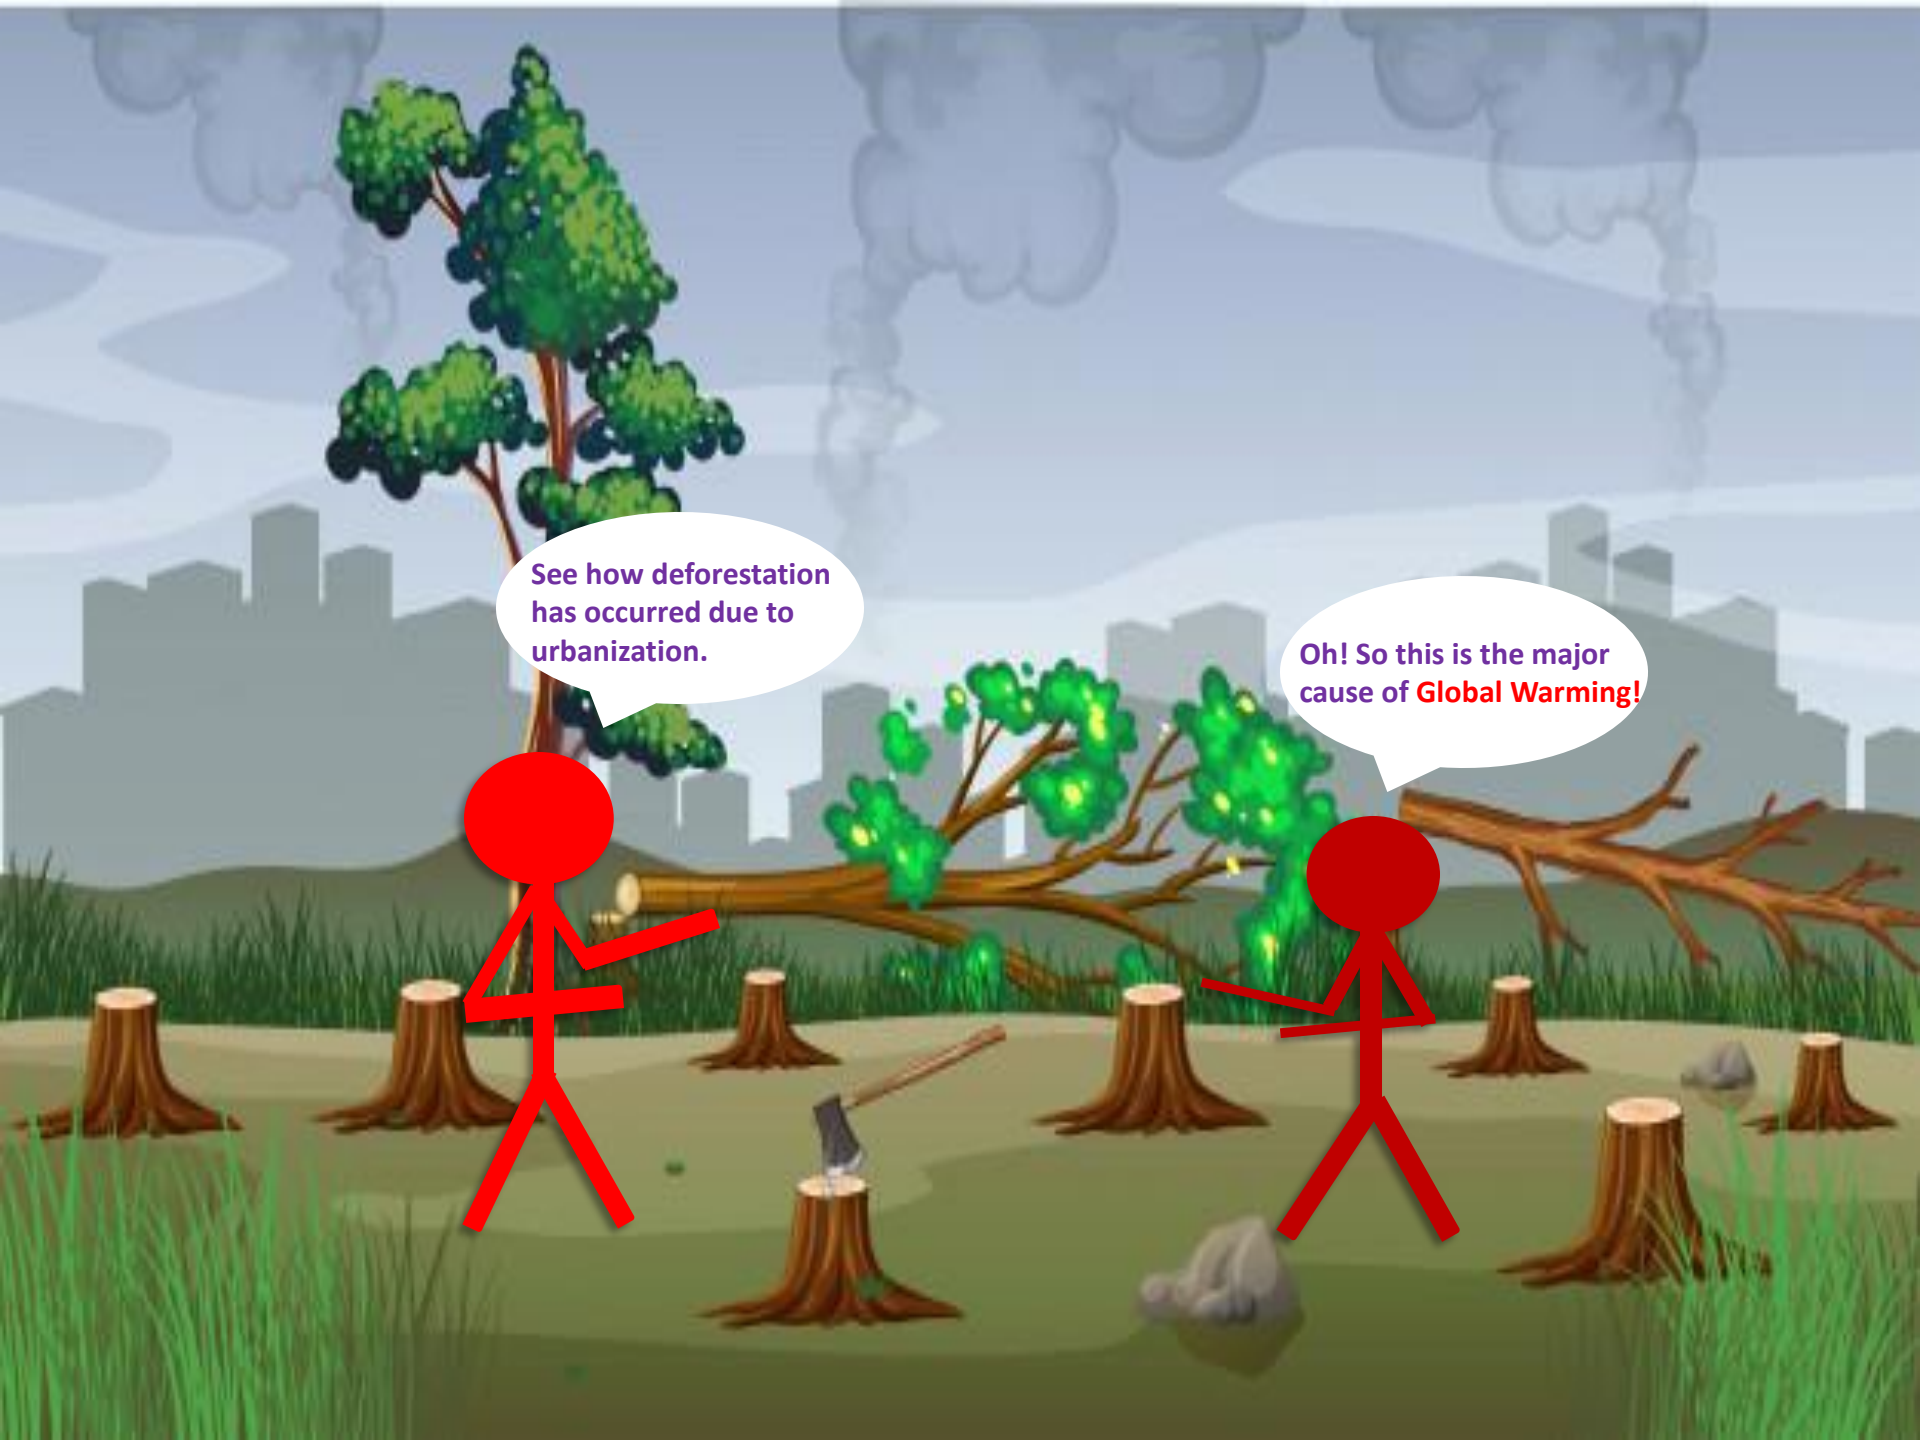

Why is there so much smoke?! I can't breathe properly.

It's because of these developing industries. They are the main cause of Air Pollution.

Humans are destroying the ecosystem by ravaging natural habitats of animals.

I never thought the world outside our village was so awful.

See how deforestation has occurred due to urbanization.

Oh! So this is the major cause of **Global Warming!**

The image shows two red stick figures standing on a grassy bank next to a blue river. The background features a lush green landscape with rolling hills, several tall evergreen trees on the left, and a large, leafy deciduous tree on the right. The sky is bright blue with a few white clouds. The stick figure on the left is gesturing with its right hand towards the other figure. Both figures have white speech bubbles above them containing text.

There are only a few unharmed forests left in the world.

I never imagined the world outside our little village is so much polluted.

So, how is it possible to restore our ecosystem?

Lets spread awareness about the grave danger our world is about to face. We have to restore the ecosystem of this planet as there is no Planet B for us.

The End
